

The diagram illustrates a complex geometric partitioning of a large rectangle. The partitioning is achieved through a series of internal lines that create a variety of polygonal shapes. The labels, which include numbers and fractions, are placed within these shapes to identify them. The labels are as follows:

- 6**: Appears in several locations, including a large central polygon and several smaller ones.
- 7**: Appears in several locations, including a large polygon on the left and several smaller ones.
- 8/9**: Appears in several locations, including a large polygon on the right and several smaller ones.
- 10/11**: Appears in several locations, including a large polygon on the right and several smaller ones.

The overall shape is a large rectangle with a small notch on the right side. The partitioning is complex, with many internal lines creating a variety of polygonal shapes. The labels are distributed throughout the diagram, with some appearing multiple times.
